

Strengthening Microsoft 365 Migration Delivery with LinkTek and ShareGate

At Reality Tech, we continue to strengthen the tools, expertise, and partnerships that help our clients complete Microsoft 365 migrations with greater confidence, continuity, and control.

We are pleased to share two important developments: Reality Tech has established a partnership with LinkTek and ShareGate, and members of our development team have achieved official ShareGate certifications. Reality Tech is expert in leveraging both ShareGate and LinkTek for migrations, and is an authorized reseller of both.

Together, these capabilities help us address both the technical movement of content and the critical document relationships that businesses rely on before, during, and after migration.

LinkTek Partnership for Link Integrity and Business Continuity

Reality Tech has established a reseller partnership with LinkTek to help clients address one of the most common risks in large-scale content migrations: broken links and disrupted content dependencies.

How this enhances our capabilities

LinkTek supports the discovery, repair, and preservation of links across documents, spreadsheets, presentations, pages, folders, shortcuts, and other interconnected business content when information is moved or restructured.

What this means for you

This helps reduce manual link remediation, minimize post-migration disruption, preserve access to business-critical information, and improve continuity for end users.

ShareGate-Certified Developers for Microsoft 365 Migrations

Members of the Reality Tech development team have achieved official ShareGate certifications, strengthening our ability to plan, execute, validate, and govern Microsoft 365 migration projects.

How this enhances our capabilities

Our ShareGate-certified developers can support source assessments, inventory analysis, permission reviews, migration planning, execution tracking, reporting, validation, and governance across SharePoint, Microsoft Teams, OneDrive, and broader Microsoft 365 environments.

What this means for you

Clients benefit from clearer visibility into migration complexity, more accurate planning, reduced delivery risk, and more predictable project outcomes.

How These Capabilities Work Together

By combining LinkTek's link-management technology with our ShareGate-certified expertise, Reality Tech can provide a more complete migration approach that includes:

- Source inventory, readiness assessment, and dependency analysis.
- Permission review, migration planning, and execution tracking.
- Link discovery, repair, preservation, and post-migration validation.
- Reporting, governance alignment, optimization, and dedicated support.

Let's Review Your Migration Roadmap

Whether you're planning a Microsoft 365 migration, tenant consolidation, SharePoint restructuring, mailbox migration, or transitioning from legacy platforms, our team is ready to help you plan a successful and low-risk modernization journey.

Book a call with our team to discuss your Microsoft 365 environment and discover practical ways to modernize with confidence.
